

HYPERTENSION, CHRONIC DISEASE SUMMARY

Patient	Lakshmi (Female, 67 y)	Report ID	VNT-LAK-2026-06-06-SUMMARY
Referred / seen by	Dr. S. Rao	Date	06 Jun 2026

Overview

Essential hypertension, diagnosed March 2018. On Metoprolol 25 mg twice daily since diagnosis. No heart attack, stroke or kidney disease to date. Lives alone in Warangal; son manages her medicines from Hyderabad.

Blood pressure over time

Date	BP (mmHg)	Pulse	Note
10 Mar 2018	162/98	78	Diagnosed. Metoprolol started
14 Apr 2018	146/90	68	Settling on treatment
14 Dec 2019	138/86	66	
2020	-	-	No clinic visits during lockdown
18 Dec 2021	140/86	64	
10 Dec 2022	134/82	64	
09 Dec 2023	138/84	62	
07 Dec 2024	140/86	62	
06 Dec 2025	142/88	64	
07 Mar 2026	136/84	62	
06 Jun 2026	148/90	58	Missing morning doses

Organ checks

Check	Date	Result
Heart scan (2D echo)	23 Aug 2025	Mild wall thickening from BP; pumping normal (EF 62%)
Heart rhythm (ECG)	07 Mar 2026	Normal, rate 61
Kidneys	07 Mar 2026	eGFR 70, no protein in urine
Eyes (fundus)	23 Aug 2025	Mild BP-related changes (grade I); vision fine
Cholesterol	07 Mar 2026	LDL 118, slightly high
Sugar	07 Mar 2026	Normal (HbA1c 5.6)

Red flags agreed with the family

Call for help at once if

1	chest pain or tightness
2	fainting, or a fall she cannot get up from
3	slurred speech, a drooping face or weakness on one side
4	a sudden severe headache with blurred vision

Advice

- Continue Metoprolol 25 mg, 1 tablet morning and 1 at night.
- Target BP below 140/90. Salt under one teaspoon a day.
- BP check every 3 months; bloods and ECG yearly; heart scan every 2 years (next Aug 2027).
- Next BP check due 4 Sep 2026.
