## ASTHMA ACTION PLAN

|                    |                   |                 |                  |
|--------------------|-------------------|-----------------|------------------|
| Patient            | Arun (Male, 29 y) | Prescription ID | RX-HYD-2026-0718 |
| Referred / seen by | Dr. K. Iyer       | Date            | 18 Jul 2026      |

### Overview

Allergic asthma since childhood, well controlled. His best peak flow is 580 L/min.

### What to do

| Zone                         | How it feels                                                                                                                                                                                                | What to do                                                                                |
|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------|
| <b>Green: doing well</b>     | Breathing easy, sleeping through the night, peak flow above 460                                                                                                                                             | 1 puff morning and night. Rinse mouth after.                                              |
| <b>Yellow: getting worse</b> | Cough, wheeze or tight chest, waking at night, peak flow 290 to 460                                                                                                                                         | Extra puffs when needed, up to 8 a day in total. Call Dr. K. Iyer if no better in 2 days. |
| <b>Red: emergency</b>        | Too breathless to speak in full sentences; the inhaler is not helping, or is needed again within 4 hours; lips or fingertips turning blue or grey; drowsy or confused while breathless; peak flow below 290 | Use the inhaler and go to the nearest emergency now. Call 108.                            |

### Rx

| Medicine                                                         | How to take                                                     | For      | Qty |
|------------------------------------------------------------------|-----------------------------------------------------------------|----------|-----|
| <b>Budesonide 200 mcg + Formoterol 6 mcg inhaler (120 doses)</b> | 1 puff morning and night; 1 extra puff when needed, max 8 a day | 6 months | 2   |

### Advice

- Rinse mouth after each use.
- Mask on high-smog days and during Diwali week.
- Spirometry yearly; next due Jul 2027.
